

- 1. Red-eye 66 treadle - so called because of the "red-eye" decals
- 2. Godzilla 66 - because of the rough finish
- 3. Hand crank 66 - could also be used in a treadle base or electrified

left-306  
uses discs for  
fancy stitches

right - 319 also  
uses discs and  
has levers on the  
top right

both use special  
needles

185

hand crank 28

99 electric

3/4 size machines

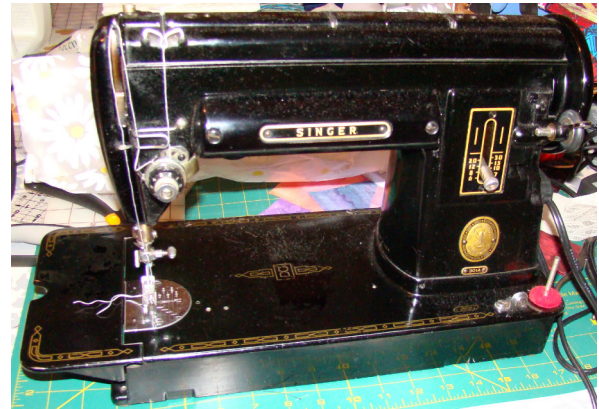

401 - has a 'cam stack' makes numerous decorative stitches without having to have extra discs.

301 long bed - uses same bobbins as the 221

feed dogs raise and lower on these two machines

301 shortbed - same machine as the long bed but has a shorter bed to the left of the needle.

Featherweight - 221 Notice the bed to the left of the needle raises just as it does on the 301s but the 221 is a **SMALL MACHINE** and very lightweight - hence the designation of "Featherweight" Do not think that just because you found an old black Singer that you scored a Featherweight. This machine is **SMALLER** than the 28/99/185 and **MUCH** lighter.

15-90 this machine has a thumbscrew underneath that raises and lowers the feed dogs - great for free motion quilting. A real work horse but **NOT** "industrial strength" no matter what some seller on Ebay says.
